

This course also comes with free access to our "**Academind Community**" on Discord: <https://academind.com/community/>

There, you can find **more than 200.000 like-minded people**, discuss issues, help each other, share progress, successes and ideas and simply **have a good time!**

I believe that you learn the most if you **don't learn alone** but find learning partners and other people with similar interests. Our community is a great place for this - it's the perfect complimentary resource for this course.

Joining it is of course free and 100% optional.

You find course resources (code snapshots & slides) on GitHub, in this repository: <https://github.com/academind/flutter-complete-guide-course-resources>

The folders in the Code folder map to the different course sections.

The folders inside those subfolders (e.g., Code/02 Flutter & Dart Basics/01 Starting Setup) represent individual code snapshots - e.g., the starting project code for a course section.

You also find the **course slides** in the above repository - or you use this [direct link](#).
